Let the world know the **Italian creative and innovative spirit, in the fields of electronics and information technology**, it is a goal to which we devote a lot of energy.

Fostering innovation, thanks to the work of our **department of Research and Development**, to stay current and take on challenges in innovative areas with confidence and professionalism, is a prerequisite of our strategy.

To better manage the projects of our clients, develop long-term relationships and internationalize the business, are the three key areas of **our business vision**.

[Strategy] and objectives

[What] we do

Our portfolio of services allows us to realize **projects and consultations in many application areas**: telecommunications and related protocols, IP protocols, embedded applications, porting Linux / Windows on embedded devices, wired and wireless devices, applications and Web services.

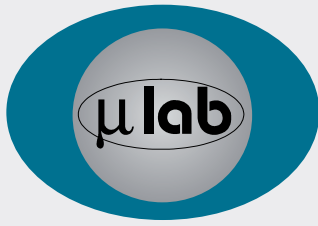

Hardware design: data transmission, signal processing, embedded systems, industrial and communication systems, Equipment ATE

Software design: planning, design, coding, testing and maintenance are handled with a **focused and productive engineering software**.

Engineering: consultancy services on all matters in the fields of electronics, feasibility studies that allow the customer to carry out his plan, engineering systems for a professional project management and production management.

Prototyping and Production: thanks to partnerships entered into with **third parties selected**, we provide production services for large batches or small series, suitable for **evaluation and prototyping purposes**.

Internationalization: Modem supply for industrial applications and support to companies in their internationalization activities.

Italy, Turkey, Iran, China, Middle and Far East,
Eastern Europe, Central/South America

target
[Market]

[Partnerships]

The experience gained at international level allows us to assume a role of marketing support, for companies that want to internationalize their business as in the case of **Eurosis Consulting**, a Turkish company operating in Turkey and in neighboring countries, as well as the Middle and Far East.

Microlab is also *technical partner* of: Silego, Freescale and Microchip Authorized Design Partner
